

Abstract

5

The invention provides a method for the patterned coating of a substrate (1) with at least one surface (2) which is to be coated, which method is suitable for the rapid and inexpensive production of precise patterns. For this purpose, the method comprises the steps of:

- producing at least one negatively patterned first coating (3, 31, 32) on the at least one surface (2),
- depositing at least one second layer (7, 71, 72, 73), which includes a material with a vitreous structure, on the surface (2) which has been provided with the first coating (3, 31, 32),
- at least partially removing the first coating (3, 31, 32).
